

9100-004, 9100-005
Grease Buster™

Description

- Concentrated, microbe and enzyme powdered cleaner which digest fat, oil and grease (“FOG”).
- Digests FOG and food waste and reduces them into carbon dioxide and water.
- Provides a “deep cleaning” by quickly penetrating porous floors.
- Reduces fly infestations by eliminating FOG build-up.
- Reduces odors caused by rancid FOG accumulation.
- Removes the greasy film, eliminating slippery floors.
- Unlike degreasers, which only liquefy FOG, it digests them completely.
- NSF-approved (A-1, A-4), neutral ph, bio-based, all-natural and biodegradable.

Advantages Profile

An all too common problem in food service environments is the accumulation of oil, grease and food waste on floors, in cracks and crevices as well as under equipment and in drains. This accumulation build-up over time produces rancid odors and attracts pests such as fruit flies, roaches and other insects. This build-up also causes greasy floors and walls, dangerously-slippery floors, clogged drains and foul odors. The use of standard cleaners, hot water and/or bleach does not remove this build-up of oil, grease and food waste and does not deter pests which will easily survive these treatments. Slip and fall accidents are the most common types of accidents in food service operations. Standard cleaners cannot remove this greasy film, and they re-distribute it over floor surfaces.

Enzyme-based products only emulsify FOG creating problems with grease traps and causing the FOG not to separate from the surfactants thus allowing oil to bypass the collection system and go straight to the sewer. Enzyme-based products will liquefy a waste, **not** digest it. This causes the FOG to re-solidify creating blockages downstream.

Technical Information

Usage	Dilution Ratio	1:25
Physical Properties	Appearance	Liquid
	Color	Amber
	Fragrance	None
	pH	7
	Shelf Life	Minimum 1 Year
Primary Packaging	9100-004	(4) 1 gal./3.78 L
	9100-005	(1) 5 gal./18.9 L

Technology Profile

BioTec Technology is the science of using both microbes **and** enzymes to dispose of FOG and food waste safely, economically and rapidly. BioTec Technology consists of microbes and enzymes producing complex chemical reactions that metabolize organic waste into carbon dioxide and water. Enzymes work by breaking apart large complex compounds like FOG into smaller molecules.

The microbes then can readily digest these smaller molecules releasing them as carbon dioxide and water. The microbes and enzymes are completely safe because they are non-pathogenic, naturally-occurring and salmonella-free. These microbes are chosen for their ability to degrade FOG as well as starches and proteins.

Application

Auto Floor Scrubber

Start with a 1:25 or 5 ounces per gallon of water dilution rate and adjust after testing. For best results, employ the double-scrub method.

For the first scrubber pass, do not lower the squeegee. Spray solution while scrubbing. For the second pass, spray solution, scrub and lower squeegee for soiled water removal.

Mopping

Add 4 ounces per gallon of water in container. Mop floor in normal manner covering all corners, cracks, crevices and under equipment. After mopping is complete, pour remaining mop water into drains.
